**The Mother-Friendly Childbirth Initiative**

*The First Consensus Initiative of the Coalition for Improving Maternity Services*

**Mission**

The Coalition for Improving Maternity Services (CIMS) is a coalition of individuals and national organizations with concern for the care and wellbeing of mothers, babies, and families. Our mission is to promote a wellness model of maternity care that will improve birth outcomes and substantially reduce costs. This evidence-based mother-, baby-, and family-friendly model focuses on prevention and wellness as the alternatives to high-cost screening, diagnosis, and treatment programs.

**Preamble**

Whereas:

- In spite of spending far more money per capita on maternity and newborn care than any other country, the United States falls behind most industrialized countries in perinatal* morbidity* and mortality, and maternal mortality is four times greater for African-American women than for Euro-American women;
- Midwives attend the vast majority of births in those industrialized countries with the best perinatal outcomes, yet in the United States, midwives are the principal attendants at only a small percentage of births;
- Current maternity and newborn practices that contribute to high costs and inferior outcomes include the inappropriate application of technology and routine procedures that are not based on scientific evidence;
- Increased dependence on technology has diminished confidence in women’s innate ability to give birth without intervention;
- The integrity of the mother-child relationship, which begins in pregnancy, is compromised by the obstetrical treatment of mother and baby as if they were separate units with conflicting needs;
- Although breastfeeding has been scientifically shown to provide optimum health, nutritional, and developmental benefits to newborns and their mothers, only a fraction of U.S. mothers are fully breastfeeding their babies by the age of six weeks;
- The current maternity care system in the United States does not provide equal access to health care resources for women from disadvantaged population groups, women without insurance, and women whose insurance dictates caregivers or place of birth;

Therefore,

We, the undersigned members of CIMS, hereby resolve to define and promote mother-friendly maternity services in accordance with the following principles:

**Principles**

We believe the philosophical cornerstones of mother-friendly care to be as follows:

**Normalcy of the Birthing Process**

- Birth is a normal, natural, and healthy process.
- Women and babies have the inherent wisdom necessary for birth.
- Babies are aware, sensitive human beings at the time of birth, and should be acknowledged and treated as such.
- Breastfeeding provides the optimum nourishment for newborns and infants.
- Birth can safely take place in hospitals, birth centers, and homes.
- The midwifery model of care, which supports and protects the normal birth process, is the most appropriate for the majority of women during pregnancy and birth.

*see glossary, next page*
Empowerment

• A woman’s confidence and ability to give birth and to care for her baby are enhanced or diminished by every person who gives her care, and by the environment in which she gives birth.
• A mother and baby are distinct yet interdependent during pregnancy, birth, and infancy. Their interconnected-ness is vital and must be respected.
• Pregnancy, birth, and the postpartum period are milestone events in the continuum of life. These experiences profoundly affect women, babies, fathers, and families, and have important and long-lasting effects on society.

Autonomy

Every woman should have the opportunity to:

• Have a healthy and joyous birth experience for herself and her family, regardless of her age or circumstances;
• Give birth as she wishes in an environment in which she feels nurtured and secure, and her emotional well-being, privacy, and personal preferences are respected;
• Have access to the full range of options for pregnancy, birth, and nurturing her baby, and to accurate information on all available birthing sites, caregivers, and practices;
• Receive accurate and up-to-date information about the benefits and risks of all procedures, drugs, and tests suggested for use during pregnancy, birth, and the postpartum period, with the rights to informed consent and informed refusal;
• Receive support for making informed choices about what is best for her and her baby based on her individual values and beliefs.

Do No Harm

• Interventions should not be applied routinely during pregnancy, birth, or the postpartum period. Many standard medical tests, procedures, technologies, and drugs carry risks to both mother and baby, and should be avoided in the absence of specific scientific indications for their use.
• If complications arise during pregnancy, birth, or the postpartum period, medical treatments should be evidence-based.

Responsibility

• Each caregiver is responsible for the quality of care she or he provides.
• Maternity care practice should be based not on the needs of the caregiver or provider, but solely on the needs of the mother and child.
• Each hospital and birth center is responsible for the periodic review and evaluation, according to current scientific evidence, of the effectiveness, risks, and rates of use of its medical procedures for mothers and babies.
• Society, through both its government and the public health establishment, is responsible for ensuring access to maternity services for all women, and for monitoring the quality of those services.
• Individuals are ultimately responsible for making informed choices about the health care they and their babies receive.

These principles give rise to the following steps (see next page), which support, protect, and promote mother-friendly maternity services:

Glossary

Augmentation: Speeding up labor.
Birth Center: Free-standing maternity center.
Doula: A woman who gives continuous physical, emotional, and informational support during labor and birth—may also provide postpartum care in the home.
Episiotomy: Surgically cutting to widen the vaginal opening for birth.
Induction: Artificially starting labor.
Morbidity: Disease or injury.
Oxytocin: Synthetic form of oxytocin (a naturally occurring hormone) given intravenously to start or speed up labor.
Perinatal: Around the time of birth.
Rupture of Membranes: Breaking the “bag of waters.”

Ten Steps of the Mother-Friendly Childbirth Initiative
For Mother-Friendly Hospitals, Birth Centers,* and Home Birth Services

To receive CIMS designation as “mother-friendly,” a hospital, birth center, or home birth service must carry out the above philosophical principles by fulfilling the Ten Steps of Mother-Friendly Care.

A mother-friendly hospital, birth center, or home birth service:

1. Offers all birthing mothers:
   - Unrestricted access to the birth companions of her choice, including fathers, partners, children, family members, and friends;
   - Unrestricted access to continuous emotional and physical support from a skilled woman—for example, a doula,* or labor-support professional;
   - Access to professional midwifery care.
2. Provides accurate descriptive and statistical information to the public about its practices and procedures for birth care, including measures of interventions and outcomes.
3. Provides culturally competent care—that is, care that is sensitive and responsive to the specific beliefs, values, and customs of the mother’s ethnicity and religion.
4. Provides the birthing woman with the freedom to walk, move about, and assume the positions of her choice during labor and birth (unless restriction is specifically required to correct a complication), and discourages the use of the lithotomy (flat on back with legs elevated) position.
5. Has clearly defined policies and procedures for:
   - collaborating and consulting throughout the perinatal period with other maternity services, including communicating with the original caregiver when transfer from one birth site to another is necessary;
   - linking the mother and baby to appropriate community resources, including prenatal and post-discharge follow-up and breastfeeding support.
6. Does not routinely employ practices and procedures that are unsupported by scientific evidence, including but not limited to the following:
   - shaving;
   - enemas;
   - IVs (intravenous drip);
   - withholding nourishment or water;
   - early rupture of membranes*;
   - electronic fetal monitoring;
   - Has an induction* rate of 10% or less;†
   - Has an episiotomy* rate of 20% or less, with a goal of 5% or less;
   - Has a total cesarean rate of 10% or less in community hospitals, and 15% or less in tertiary care (high-risk) hospitals;
   - Has a VBAC (vaginal birth after cesarean) rate of 60% or more with a goal of 75% or more.
7. Educates staff in non-drug methods of pain relief, and does not promote the use of analgesic or anesthetic drugs not specifically required to correct a complication.
8. Encourages all mothers and families, including those with sick or premature newborns or infants with congenital problems, to touch, hold, breastfeed, and care for their babies to the extent compatible with their conditions.
10. Strives to achieve the WHO-UNICEF “Ten Steps of the Baby-Friendly Hospital Initiative” to promote successful breastfeeding:
   - Have a written breastfeeding policy that is routinely communicated to all health care staff;
   - Train all health care staff in skills necessary to implement this policy;
   - Inform all pregnant women about the benefits and management of breastfeeding;
   - Help mothers initiate breastfeeding within a half-hour of birth;
   - Show mothers how to breastfeed and how to maintain lactation even if they should be separated from their infants;
   - Give newborn infants no food or drink other than breast milk unless medically indicated;
   - Practice rooming in: allow mothers and infants to remain together 24 hours a day;
   - Encourage breastfeeding on demand;
   - Give no artificial teat or pacifiers (also called dummies or soothers) to breastfeeding infants;
   - Foster the establishment of breastfeeding support groups and refer mothers to them on discharge from hospitals or clinics.

† This criterion is presently under review.
When The Mother-Friendly Childbirth Initiative (MFCI) was drafted, the authors envisioned hospitals, birth centers, and home birth services as being able to fulfill all of the Ten Steps over time. Over the years, our nation’s health care system became more complex and included a greater number of stakeholders. In turn, it became evident that providing optimal care for mothers and babies did not rest solely in the hands of the dedicated professionals and administrators. CIMS encourages hospitals, birth centers, and home birth services to work towards implementing the Ten Steps of the MFCI as they are able to for improved childbirth outcomes.

Endorse The Mother-Friendly Childbirth Initiative

Since ratification in 1996, the principles and Ten Steps of the Mother-Friendly Childbirth Initiative have been endorsed by hundreds of individuals and organizations. For a complete list of endorsers, or to add your name or your organization’s name, please visit our Web site at www.motherfriendly.org.

Help Circulate The Mother-Friendly Childbirth Initiative

Free copies of this document, as well as the consumer version, “Having a Baby? Ten Questions to Ask,” can be downloaded from the CIMS Web site at www.motherfriendly.org. Bulk quantities are available for purchase. Visit our Web site, or contact us, for pricing and ordering information.

 ratified by these members of the Coalition for Improving Maternity Services (CIMS), July, 1996

**Organizations** *(names of organizations’ officers may have changed since ratification):*

- Academy of Certified Birth Educators (Olathe, KS), Linda M. Herrick, RN, BSN, CCE, CD; and Sally Riley, BS, Ed, CCE, CD, & Jude C. Wika, RN, MSc, CNM, CCE, Co-Directors
- American Academy of Husband-Coached Childbirth (The Bradley Method™), (Sheman Oaks, CA), Jay and Marjie Hatheway, Executive Directors
- American Association of Birth Centers (formerly National Association of Childbearing Centers), (Perkiomenville, PA), Susan Stapleton, MSN, CNM, President
- American College of Nurse-Midwives (Washington, DC), Joyce Roberts, CNM, PhD, FACNM, President
- American College of Domiciliary Midwives (Palo Alto, CA), Faith Gibson, CPm, Executive Director
- Association of Labor Assistants and Childbirth Educators (Cambridge, MA), Jessica L. Porter, President
- Association for Prenatal & Perinatal Psychology & Health (Geyserville, CA), David B. Chamberlain, PhD, President
- Association for Women’s Health, Obstetrics, and Neonatal Nurses (Washington, DC), Jay Ghorai, RN, MSc, NS, President
- Association of Childbearing Centers, (Perkiomenville, PA), Mary Brucker, CNM, DNSc, Dallas, TX, Brian Berman, BSE, FACCE, CD, and ordering information.
- BirthWorks, Inc. (Medford, NJ), Cathy E. W. Daub, RPT, CCE, President
